What the project focuses on.

Make receiving, reservation, and fulfilment decisions traceable for each retailer account.

FEATURE 01

Receiving and stock ledger

Trace inventory through receipts and adjustments.

FEATURE 02

Order reservations

Connect available stock to order reservations.

FEATURE 03

Pick-pack queues

Organize fulfilment work into clear next steps.

FEATURE 04

Retailer inventory portal

Give each retailer a focused inventory view.

Workflow at a glance

STEP 01

Receive inventory

STEP 02

Reserve available stock

STEP 03

Pick and pack

STEP 04

Review stock movements

This overview communicates the project’s intended business flow; it is not a technical specification or original system diagram.

The business objectives.

The project's focus translated into practical goals for the people using it.

OBJECTIVE 01

Retailers could inspect stock without requesting a spreadsheet.

OBJECTIVE 02

Warehouse teams could trace the origin of each adjustment.

OBJECTIVE 03

Orders could reserve available stock before picking begins.

Design considerations

- Define role permissions and account boundaries.
- Keep workflow decisions attached to their business records.
- Handle integration errors and exceptional handoffs clearly.

About this brief

Prepared from the current portfolio summary. Client identities, original screenshots, delivery dates, and measured results were not supplied. The artwork is AI-generated; business benefits describe objectives, not verified outcomes.
